Adaptivity and Unisys Join Forces on Solutions for Data Center Transformation

Industry Innovators Collaborate to Systematically Transform IT Delivery through Virtualization, Automation & Cloud Infrastructure Solutions and Best Practices

CHARLOTTE, N.C. – May 01, 2009 – Adaptivity, the IT Transformation Company, and Unisys Corporation (NYSE: UIS) today announced that they have expanded their relationship. Under the expanded agreement, the two companies will jointly provide IT transformation solutions that combine Adaptivity's IT technology library and applied expertise with Unisys 3D Blueprinting approach to mapping business to IT and Unisys solutions for management of a real-time infrastructure (RTI).

Adaptivity and Unisys intend these solutions to help clients proactively address one of the greatest challenges enterprises face today: reactive and costly delivery of IT services to the business. Enterprises are constrained in how quickly they can respond to dynamic market challenges, and those constraints can lead to lost business opportunities and overbearing costs.

To break the cycle, successful, forward-thinking organizations must implement a "business-driven RTI" approach. This strategy allows companies to transform their delivery models and differentiate the delivery and execution of IT services that support the business.

"CIOs are looking for a proven template to effect systemic transformation of the traditional IT delivery model in order to drive profitability and sustainability, while strengthening their company's competitive advantages," said Tony Bishop, CEO and founder, Adaptivity. "The combination of Adaptivity's transformative tools and unparalleled industry expertise and Unisys best practices in business-IT linkage, RTI solutions and global reach will give CIOs the technologies and resources necessary to drive IT change."

The joint solutions combine Adaptivity FUEL™ (Flexible Unified Enterprise Library) and Unisys RTI solutions using the Unisys 3D Blueprinting approach. This services-driven methodology provides clients greater visibility into critical linkages and relationships among various levels of the organization, from strategy to IT infrastructure, enabling them to see the effects of critical decisions

in advance. Adaptivity FUEL is a suite of proven practices, playbooks, work products, blueprints, tools and methodologies that lay the groundwork for demand-driven IT transformation programs.

In combination, the solutions based on the 3D Blueprinting approach and FUEL allow joint Unisys and Adaptivity clients to utilize easy-to-use templates and select the tools and services they need to get an accurate view of the data center infrastructure model that will best benefit their business – providing them with a step-by-step approach to systematically transform IT.

"Unisys has pioneered the development and implementation of comprehensive methodologies and tools that intensify the linkage between business and IT, and these integrate well with Adaptivity's reusable knowledge base," said Brian Ott, vice president, Global Services, Unisys Systems and Technology. "Unisys relationship with Adaptivity illustrates our shared commitment to leverage the best in market practices to transform and automate data center technologies and operations to align with client business priorities."

About Unisys
Unisys is a worldwide information technology company. We provide a portfolio of IT services, software, and technology that solves critical problems for clients. We specialize in helping clients secure their operations, increase the efficiency and utilization of their data centers, enhance support to their end users and constituents, and modernize their enterprise applications. To provide these services and solutions, we bring together offerings and capabilities in outsourcing services, systems integration and consulting services, infrastructure services, maintenance services, and high-end server technology. With more than 28,000 employees, Unisys serves commercial organizations and government agencies throughout the world. For more information, visit www.unisys.com.

About Adaptivity
Adaptivity, the IT Transformation Company, has changed infrastructure computing for the enterprise as we know it. Adaptivity's IT library, delivery capabilities and applied expertise enables enterprises to run IT like a business. With a template of its proven methodologies and solutions, Adaptivity empowers firms to execute incremental, systematic transformation of IT delivery one application at a time – gaining application performance of up to 50 percent and improving the Return on Equity (ROE) of IT investments by up to 20 percent. Adaptivity FUEL™ (Flexible Unified Enterprise Library), the company's suite of proven IT analytics and engineering tools and practices, provide firms with the foundation they need to deliver demand-driven IT transformation.
